SECTION A : MCQs (20 Marks)

1. Which command is used to list files in Linux? *

☐ Show

☒ ls

☐ mkdir

☐ sudo su

2. What does pwd stand for? *

☐ Print Working Directory

☐ Present Working Disk

☒ Path Working Directory

☐ Print Web Directory

New tab x VAPT Internship — Nepal | Week 2 x +

docs.google.com/forms/d/e/1FAIpQLSF336CakQbwAdYtXNRIImRpRplkvTsK9g7s6d12MhspMvILDw/formResponse?pli=1

☐ Print web directory

3. Which command is used to change directories? *

☐ mv

☒ cd

☐ cp

☐ dir

4. What does chmod do? *

☐ Changes file name

☐ Changes ownership

☒ Changes permissions

☐ Deletes file

5. Which symbol represents root user in terminal? *

☐ \$

☒ #

☐ @

☐ &

Section B : Short Answer Questions (20 Marks)

Q1. Explain basic Linux commands with examples. (7marks) *

Linux provides command-line tools to interact with the system efficiently. Some basic commands are:

- a. ls - Lists files and directories Example: `ls -l` (shows detailed list)
- b. pwd - Displays current directory Example: `pwd`
- c. cd - Changes directory Example: `cd /home/user`
- d. mkdir - Creates a new directory Example: `mkdir test`
- e. rm - Deletes files or directories Example: `rm file.txt`
- f. cp - Copies files Example: `cp file.txt backup.txt`
- g. mv - Moves or renames files Example: `mv file.txt /home/user/`
- h. cat - Displays file content Example: `cat file.txt`

These commands are essential for navigating and managing files in Linux.

Q2. Explain file permissions in Linux. (7 marks) *

Section B : Short Answer Questions (20 Marks)

Q2. Explain file permissions in Linux. (7 marks) *

Linux uses file permissions to control access to files and directories. There are three types of users:

- Owner (u) - The file creator
- Group (g) - Users in the same group
- Others (o) - All other users

There are three types of permissions:

- Read (r) - View file content
- Write (w) - Modify file
- Execute (x) - Run file as a program

Example: `-rwxr-xr-`

This means:

- Owner: read, write, execute
- Group: read, execute
- Others: read only

To change permissions, we use `chmod`.

Example: `chmod 755 file.sh`

Owner has full access, others have read and execute

Numeric values:

- 7 = rwx
- 5 = r-x
- 4 = r--

Permissions help secure files and restrict unauthorized access.

Q3. Explain basic networking commands used in Kali Linux. (6 marks) *

Kali Linux includes several networking tools used for troubleshooting and security testing:

Example: `chmod 755 file.sh`
 Owner has full access, others have read and execute

Numeric values:
 7 = `rwx`
 5 = `r-x`
 4 = `r--`

Permissions help secure files and restrict unauthorized access.

Q3. Explain basic networking commands used in Kali Linux. (6 marks) *

Kali Linux includes several networking tools used for troubleshooting and security testing:

- a. `ping` – Checks connectivity between systems Example: `ping google.com`
- b. `ifconfig` / `ip a` – Displays network interface details Example: `ip a`
- c. `netstat` – Shows network connections and ports Example: `netstat -tuln`
- d. `traceroute` – Shows path packets take to a destination Example: `traceroute google.com`
- e. `nslookup` – Queries DNS information Example: `nslookup google.com`
- f. `nmap` – Scans networks for open ports and services Example: `nmap 192.168.1.1`

These commands are useful for diagnosing network issues and performing security assessments.

Task C2-Permission Analysis

Permission	Octal	File Type	Explanation
-rwxr-xr--	754	File	- Owner: rwx (read, write, execute) - Group: r-x (read, execute) - Others: r-- (read only)
drwxrwxrwx	777	Directory	Owner/Group/Others: full permissions (read, write, execute)

-r-sr-xr-x	4555	File (SUID)	- Owner: r-x + SUID (runs as owner/root) - Group: r-x - Others: r-x
-rw-----	600	File	- Owner: read & write - Group: none - Others: none
drwxr-xr-x	755	Directory	- Owner: full - Group: read & execute - Others: read & execute
-rwsr-sr-x	6755	File (SUID + SGID)	- Owner: rwx + SUID - Group: r-x + SGID - Others: r-x
